

Press release
Helsinki
6th October 2025:

Intero – The Sniffers and Aeromon merge to create the world’s most comprehensive emission monitoring and management provider

Intero – The Sniffers and Aeromon are proud to announce their merger. This strategic combination establishes the most complete suite of emission detection, quantification, and management solutions available worldwide, enabling customers to access laboratory accredited emission services.

Aeromon, with its innovative airborne technology and site-level monitoring capabilities, brings unique precision, speed, and scalability to emission detection. Intero – The Sniffers has been a trusted partner in emission management for decades, offering ground-based services and compliance support across industries. Joined, the companies will deliver unmatched expertise and innovative solutions that enable our customers to achieve efficient compliance with OGMP and EU methane regulations among other emission monitoring services.

This merger will bring our clients:

- **Complete Accredited Emission Reporting.** Both companies have laboratory ISO 17025 accreditations in providing emission measurement services, thus being able to support clients from highly accurate ground-based to effective and flexible site-level emission reporting.
- **Better Service and Reach.** With enhanced resources and global scalability, the combined organization ensures robust and seamless service delivery across all regions.
- **New Capabilities and Innovation.** Growing the research and development and bringing business development and innovation to the core will also strengthen the new service offering and answer to the growing client demand in improved efficiency and automation in emission management.
- **Stronger Sustainability Impact.** Together, we accelerate the fight against methane and other greenhouse gas emissions, helping customers meet stringent regulatory requirements and achieve ambitious sustainability goals.

“By joining forces with Aeromon, we bring together decades of expertise and groundbreaking technology. This positions us as the clear global leader in emission monitoring and management, offering customers the most complete and innovative solutions available.” said Philippe Guldemont, Managing Director of Intero – The Sniffers.

“We are pleased to merge with Intero – The Sniffers, uniting teams of exceptional talent and expertise. This partnership not only strengthens and complements our service offerings, but also paves the way for future innovations and solutions that will create greater value for our clients.”, said Maria Kuosa, CEO of Aeromon.

The management teams of both companies are committed to ensuring a smooth transition and integration. The merger is expected to be completed during October 2025.

About Aeromon

Aeromon provides ISO/IEC 17025-accredited mobile emission measurement services that help industrial companies quantify and manage their emissions. Since 2014, Aeromon has delivered reliable, traceable data to support emission reduction efforts and compliance with frameworks such as the EU Methane Regulation and OGMP 2.0 Level 5. With scalable solutions for site-level monitoring, flare efficiency measurement, and multi-parameter detection, Aeromon enables clients to improve environmental reporting, meet sustainability targets, and make informed operational decisions.
